Detailed Action

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, 30-47 and 66-74 drawn to a composition containing propellant, classified in class 424, subclass 45 and class 128, subclass 200.14.
- II. Claims 13-29 and 48-65 drawn to a propellant free composition, classified in class 424, subclass 434.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because propellant compositions require propellants and specific containers suitable for containing propellants. The propellant free compositions do not require the particulars of propellant containing compositions. The propellant free compositions have separate utility such as drops or regular sprays.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Election of Species

The inventions are distinct, each from the other because of the following reasons:

Claims 39-74 are generic to a plurality of disclosed patentably distinct species comprising methods of treating various disorders by using compositions comprising testosterone. Applicant is required under 35 U.S.C. 121 to elect a **single** disclosed species (e.g, treating hypogonadism), even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete **must** include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant was not telephoned for a restriction/election in this application because applicant requested written restriction/election requirements during an interview on the parent and co-pending applications.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mina Haghighatian whose telephone number is 571-272-0615. The examiner can normally be reached on core office hours.
